Brigham and Women's Hospital Virology Laboratory performs multiple testing modalities for different viruses. These include cell culture, serology, and rapid antigen testing. The Virology Laboratory is an acknowledged reference laboratory.

The history of the Virology laboratory began in 1982 when Dr. Christine St. Müller started the laboratory. Since then, the laboratory has grown to include specimen collection guides, specimen collection training, and a laboratory user manual. The Clinical Virology Laboratory is a full-service virology laboratory that performs rapid antigen testing, molecular methods, culture, and serology.

We provide a full range of virology tests to our users, and our development team is continuously working to improve our services.

No, however, if the patient needs the result rapidly, contact the Virology lab at 415-353-4730 to make sure the sample is included in the next available run. Kirk W. Benge, MPH – Program Manager: Virology and Immunology.

***Note: Specimen containers from the State of Utah Public Health Lab have an “outdate”.

The BC Public Health Microbiology & Reference Laboratory is the primary public health laboratory for British Columbia. The Virology Program experts carry out diagnostic and reference testing. Information about the Laboratory Operations Unit and links to groups within the unit are available in the Laboratory Testing Services Manual.
